

*An open source research programme for Smart Ledgers and new technologies*

# Liquidity Or Leakage Plumbing Problems With Cryptocurrencies

Long Finance Webinar

Wednesday, 10 January 2019, 09:30 to 10:00

(presentation starts at 09:31)

**Z/Yen Group Limited**  
41 Lothbury  
London EC2R 7HG  
United Kingdom  
tel: +44 (20) 7562-9562  
[www.zyen.com](http://www.zyen.com)

**Michael Mainelli**  
Executive Director  
Z/Yen Group

[michael\\_mainelli@zyen.com](mailto:michael_mainelli@zyen.com)

# Agenda

09:30 – 09:35	Welcome & Introduction
09:35 – 09:50	Presentation
09:50 – 09:55	Questions
09:55 – 10:00	Concluding Remarks

# Report

Read the [report](https://www.longfinance.net/publications/long-finance-reports/liquidity-or-leakage-plumbing-problems-in-cryptocurrencies/) at:

<https://www.longfinance.net/publications/long-finance-reports/liquidity-or-leakage-plumbing-problems-in-cryptocurrencies/>

- ◆ **Special** – City of London’s leading commercial think-tank
- ◆ **Services** – projects, strategy, expertise on demand, coaching, research, analytics, modern systems
- ◆ **Sectors** – technology, finance, voluntary, professional services, outsourcing

- Independent Publisher Book Awards Finance, Investment & Economics Gold Prize 2012 for ***The Price of Fish***
- British Computer Society **IT Director of the Year** 2004 for PropheZy and VizZy
- DTI **Smart Award** 2003 for PropheZy
- *Sunday Times* Book of the Week, ***Clean Business Cuisine***
- £1.9M **Foresight Challenge Award** for Financial Laboratory visualising financial risk 1997

# Distributed Futures Programme

We work in partnership with many stakeholders to learn together and build the vital infrastructure needed to make Smart Ledgers a success.

Our research is structured around four themes:

- ◆ Societal
- ◆ Technological
- ◆ Economic
- ◆ Political

Directed at four outcomes:

- ◆ Expanding frontiers
- ◆ Changing systems
- ◆ Delivering services
- ◆ Building communities

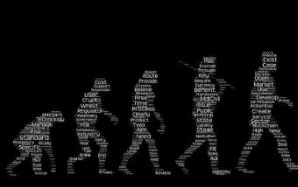

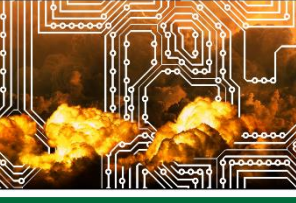

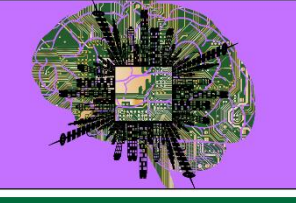

# Sponsored By

The Z/en Group

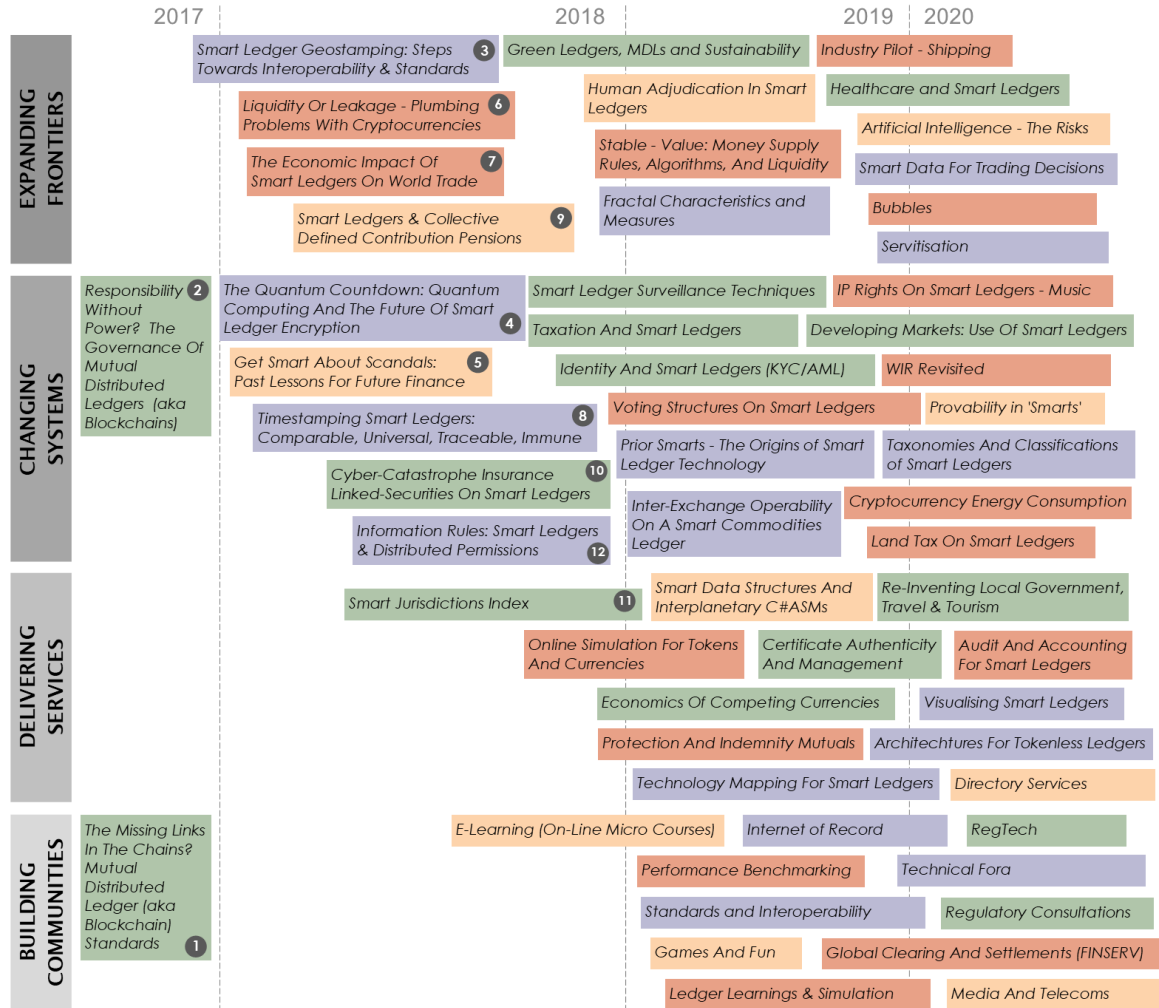

# Distributed Futures Research

# Timeline

# Terminology Evolving

- ◆ **ledger** – a record of transactions
- ◆ **distributed** – divided among several or many, in multiple locations
- ◆ **mutual** – shared in common, or owned by a community
- ◆ **mutual distributed ledger (MDL)** - a record of transactions shared in common and stored in multiple locations
- ◆ **mutual distributed ledger technology** – a technology that provides an immutable record of transactions shared in common and stored in multiple locations
- ◆ **blockchain** - “a transaction database shared by all nodes participating in a system based on the Bitcoin protocol”
- ◆ **smart ledger** – MDL with embedded, executable code

# Smart Ledgers Hold Immense Promise

Area	Possible Applications
Financial instruments, records, models	Currency, private and public equities, certificates of deposit, bonds, derivatives, insurance policies, voting rights associated with financial instruments, commodities, derivatives, trading records, credit data, collateral management, client monies segregation, mortgage or loan records, crowd-funding, P2P lending, microfinance, (micro)charity donations, account portability, airmiles & corporate tokens, etc.
Public records	Land and property titles, vehicle registries, shipping registries, satellite registries, business license, business ownership/incorporation/dissolution records, regulatory records, criminal records, passport, birth/death certificates, voting ID, health and safety inspections, tax returns, building and other types of permits, court records, government/listed companies/civil society, accounts and annual reports, etc.
Private records	Contracts, ID, signature, will, trust, escrow, any other type of classifiable personal data (e.g. physical details, date of birth, taste) etc.
Semi-private/semi-public records	High school/university degrees and professional qualifications, grades, certifications, human resources records, medical records, accounting records, business transaction records, locational data, delivery records, genome and DNA, arbitration, genealogy trees, clinical trials, etc.
Physical keys	Key to home, hotel, office, car, locker, deposit box, mail box, Internet of Things, etc.
Intellectual property	Copyrights, licenses, patents, digital rights management of music, rights management of intellectual property such as patents or trademarks, proof of authenticity or authorship, etc.
Other records	Cultural, historical events, documentary (e.g. video, photos, audio), (big) data (weather, temperatures, traffic), SIM cards, archives, geostamping, etc.

## **Liquidity Or Leakage** **Plumbing Problems With Cryptocurrencies**

# Liquidity Or Leakage: Approach

- ◆ Cryptocurrency MDLs – Introduction And Security Risks
- ◆ Cryptocurrency Liquidity And Market Risk Factors
  - The Crypto Market's Liquidity Risk
  - So What's Creating Crypto Illiquidity?
  - Crypto Market Risk Factors
- ◆ Smart Contracts – The Legal Risks
- ◆ Smart Contracts – A Path To Reduce Counterparty Credit Risk
- ◆ Conclusions

# Cryptocurrency MDLs – Introduction

## Mutual Distributed Ledger (MDL) Defined

A mutual distributed ledger (aka blockchain) is a computer data structure (an ordered chain of data blocks) with the following defining attributes:

- Mutual - shared across organizations and owned equally by all members of the network
- Distributed - copies of the data are spread across multiple locations. Each user on the network keeps her own copy, thus providing resilience and robustness
- Ledger - the structure is immutable. Once a transaction is written to the data structure it cannot be erased. This means the ledger's integrity can be easily proven.

Another way to think of mutual distributed ledgers is as permanent timestamping engines for computer records. Timestamps can be used to prove that data elements were entered at or before a certain time and have not been altered.

## Mutual Distributed Ledger Security Vulnerabilities

- 51% Attack - a mining pool that controls 51% of an MDLs mining power can hard fork at will, potentially appending false transactions to the main chain of blocks
- Selfish Mining Attack – as described by [Eyal and Sirer, 2013], this attack requires just 33% of the total mining power

A quick look at the mining power of the major mining pools, Figure 2, suggests that two large pools could potentially collude to launch a successful selfish mining attack.

# Liquidity And Market Risk Factors

## What Is Asset Liquidity?

- An asset is said to be liquid if one may transact it without materially impacting its prevailing market price
- We expect the rate of return for illiquid assets to exceed the rate of return for liquid assets (recall Figure 3). The rationale is that an investor must be compensated for taking on liquidity (i.e., transaction) costs in an illiquid asset.
- Given the outlandishly high crypto-returns we expect to measure low levels of liquidity (conversely, high illiquidity) in this market

## What Does The Index Of Martin Tell Us (Figure 4 – Figure 6)?

- The Bitcoin markets are all at least two orders of magnitude more illiquid than the large-cap equity market ETFs. This would help explain the outsized returns (due to the illiquidity premium) observed in the Bitcoin markets.
- Bitcoin illiquidity increased at least an order of magnitude from 2016 to 2017. Again, this illiquidity uptick contributed to the massive Q4 2017 returns observed in the Bitcoin markets.
- There are material liquidity gaps between the different crypto-trading venues

# Liquidity And Market Risk Factors

## The Crypto-Liquidity Black Hole

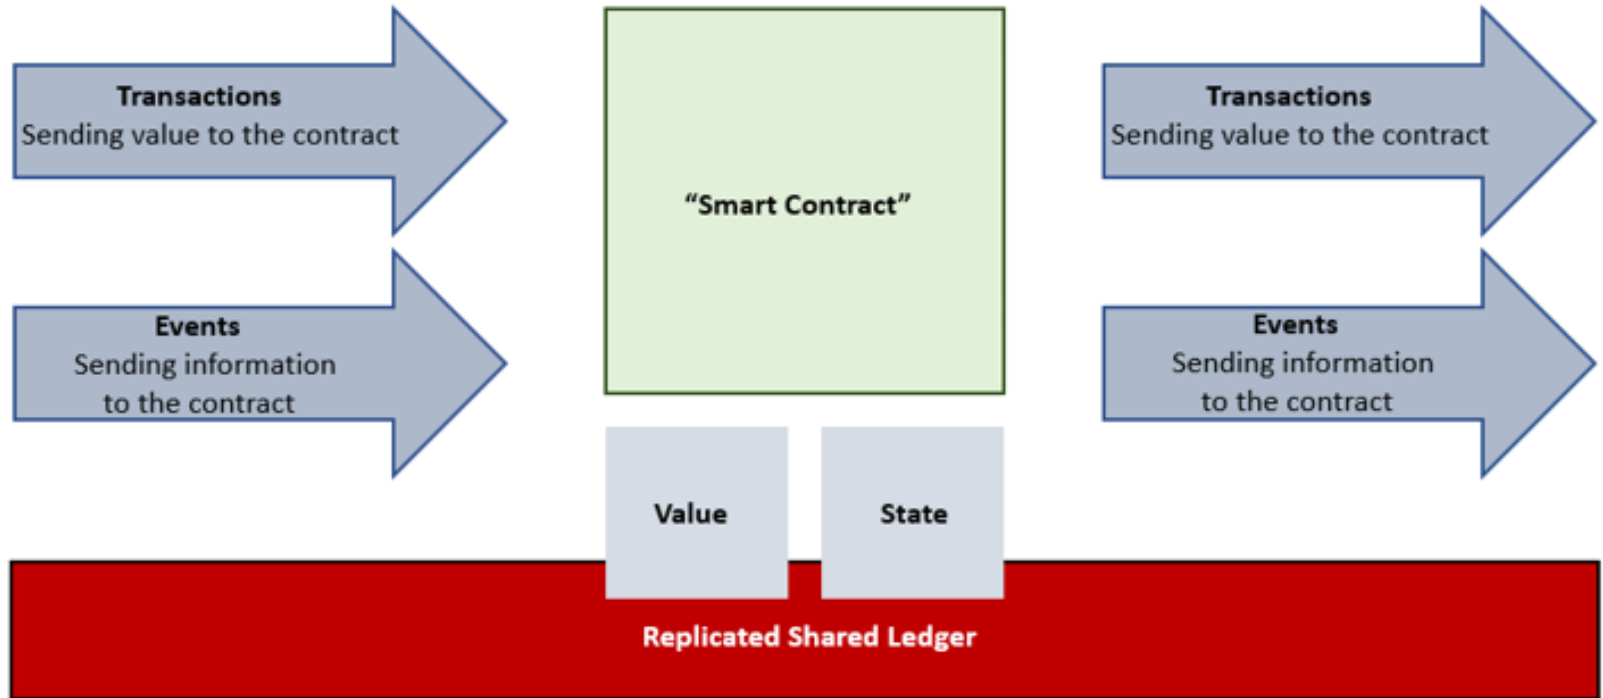

- Per [Mainelli 2007], to say that an asset market resides in a liquidity black hole that means there is a positive feedback between trading and asset price – an increase in price causes more purchases whereas price reductions cause more sales
- Homogeneity of the incentives of the few large crypto-market participants (hoarders and miners) breeds this illiquidity

## The Liquidity and Market Risk Headline Is...

The liquidity and market risks are quite substantial in the crypto-markets. To a large extent they are not hedge-able. Hence an investor must thoughtfully assess her appetite for assuming these types of risks. The number of vendors that transact in cryptos will be small until the exchange rate volatility becomes manageable and hedge-able.

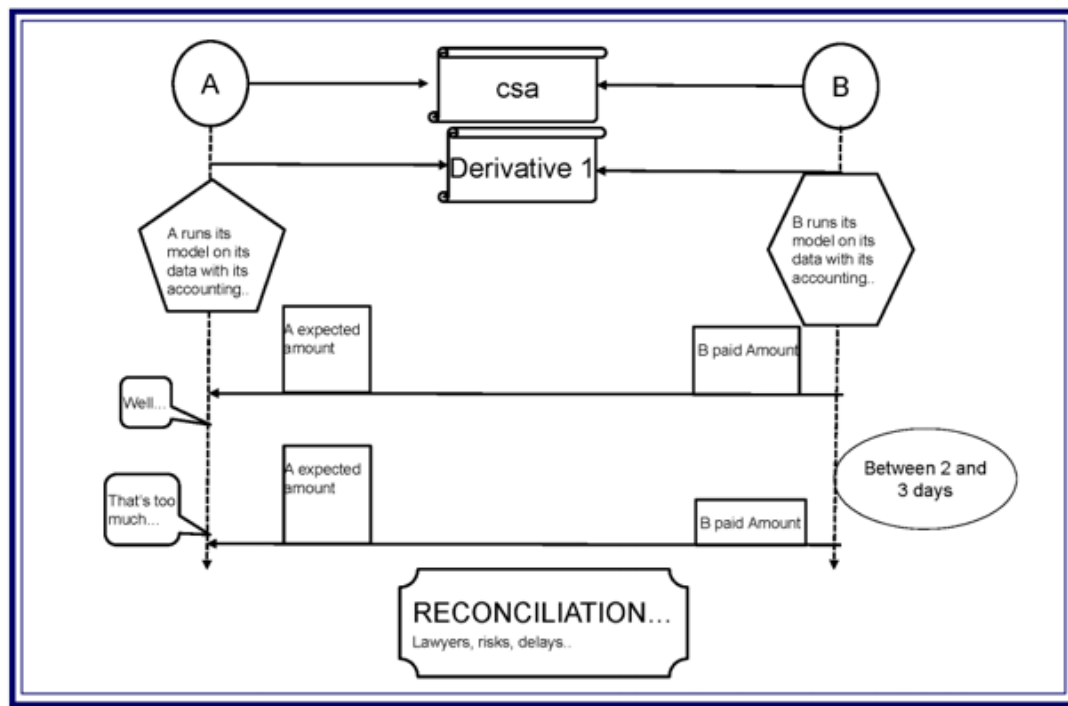

- There is evidence of crypto-exchange hacking activity causing intra-exchange illiquidity 'pops'
- Illiquidity pops are correlated with dramatic changes in crypto-exchange rates
- The recent equity market decline occurs as there is moderate to high correlation between crypto-exchange rates and equity indexes

# Smart Contracts – The Legal Risks

# Smart Contracts - A Path To Reduce Counterparty Credit Risk?

Exchange Name	Domicile	Derivatives Listed
<u>Quedex</u>	Gibraltar	1,2,3, month futures and European-style options on USD/BTC FX rates
<u>Deribit</u>	Netherlands	1,2,3, month futures and European-style options on USD/BTC FX rates
<u>Digitex</u>	Seychelles	BTC/USD, ETH/USD & LTC/USD future. 2018 – Q4 planned start
<u>Teraexchange</u>	USA	USD/BTC forwards, overnight to 2Y delivery tenor

# Conclusions

- Mutual Distributed Ledgers should employ best practice software development processes and information security protocols
- The impact of Meltdown and Spectre on MDLs and crypto-wallets has yet to be quantified but may be quite severe
- The extreme illiquidity and hyper-volatility make cryptocurrencies compelling assets for speculators but diminish their value proposition for vendors and regulated financial service firms
- The Index of Martin is a simple liquidity monitoring metric that can indicate the occurrence of 'illiquidity pops' in the cryptocurrency markets
- ISDA standardization of smart legal contracts will support scalability of these digital contracts, helping to cement their adoption by global investment banks
- The United Kingdom's common law system is inherently flexible enough to facilitate smart legal contracts and to quickly respond to the opportunities and challenges that they may present (including the question of enforceability)
- The OTC derivatives market must embrace transformational change to realise the cost-saving benefits of smart derivative contracts

# Ariditty Ditty

**So, financiers observe, small pools  
suck larger pools' liquidity;  
yet tinier pools drain other drops,  
and so on to aridity.**

*With Apologies To Jonathan Swift*

So, naturalists observe, a flea  
Has smaller fleas that on him prey;  
And these have smaller still to bite 'em, And so proceed \_ad  
infinitem\_

# And Then So What?

- ◆ Timing, value, market, monetary liquidity
- ◆ Black holes – sellers bring out sellers
- ◆ White bubbles – buyers bring out buyers
- ◆ Diversity – transactions and participants
